TransFire - Installation Guide for Windows

Contents

Installation Pre-requisites:

1. Java Runtime Environment 1.6 or above must be installed on the system
2. For Windows 7 - 32 bit OS use following link:

Windows x86 Offline	19.26 MB	jre-7-windows-i586.exe

3. For Windows 7 - 64 bit OS use following link:

Windows x64	20.34 MB	jre-7-windows-x64.exe

4. If TransFire has been installed previously on the system then:
   a. Uninstall TransFire by following the **Steps for Uninstalling TransFire:**
   b. Search for the TransFire folder in the C: drive of the system and manually delete the folder.

Steps for Installing TransFire:

1. Double Click on **TransFire.exe** file. Following screen will appear:

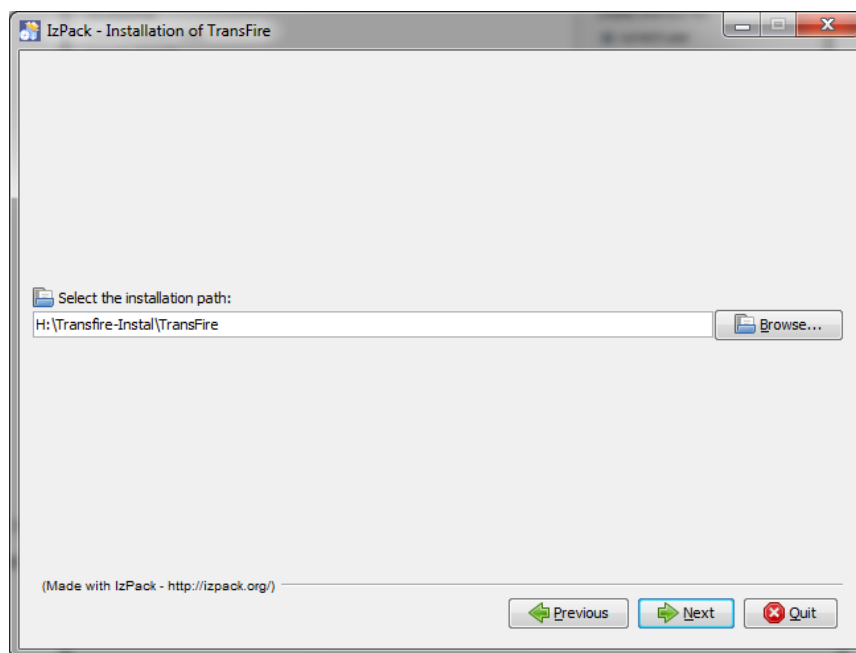

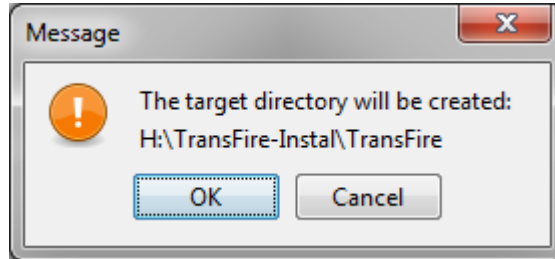

Image 1

2. In the above screen user is prompted to enter the installation path by clicking on **Browse** button e.g. **H:\Transfire-Instal\TransFire**

    NOTE: Installation path is same as **TransFire Home**

3. Then click on the **Next** button.
    a. If the Installation path entered does not exist, user is shown the following screen. Click **Ok** to create the folder or **Cancel** to abort creation**.**

    b. On clicking **OK** user is taken to following screen

4. User only needs to click on **Next** button to move to the following screen. User can see the installation progress. On successful installation the [Finished] message is shown on Pack installation progress. Click on **Next** button to move to next Setup Shortcuts screen.

5. User will be taken to the **Setup Shortcuts** screen as follows. Click **Next** with the default values selected.

a. TransFire chat application shortcuts will be created on the **Desktop** and **StartMenu.**

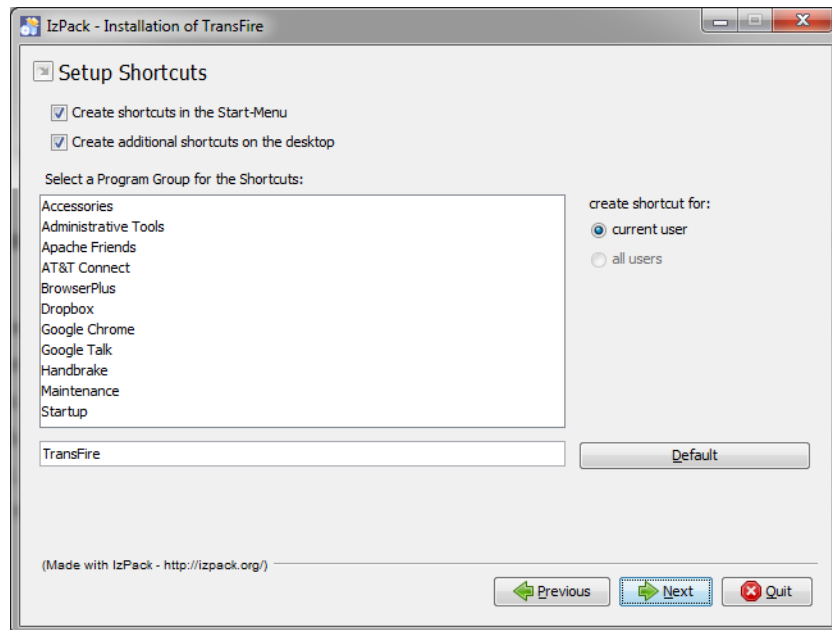

Image 3

6. Next screen below will give the status of installation and will also show the path of uninstaller folder. Click on the "**Done"** button. Your installation is now **complete**.

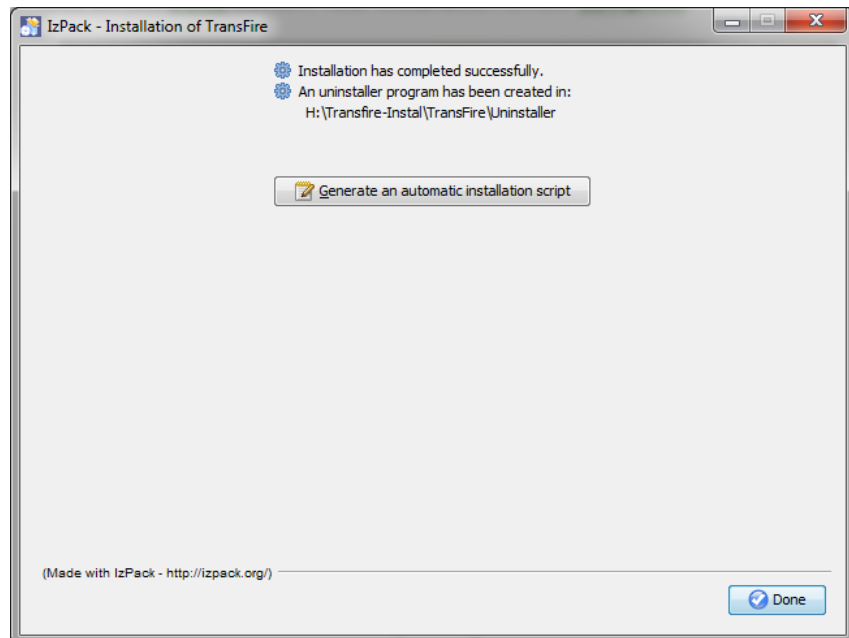

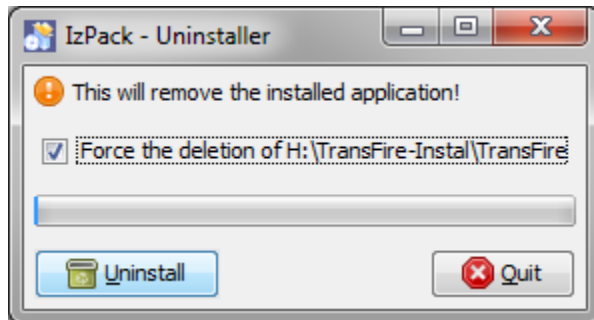

Image 4

7 Double-click on any of the shortcuts (created on Desktop & StartMenu) to launch the TransFire chat application.
8. The login dialog is displayed. User needs to login with valid user credentials

NOTE: For Search feature to work please install default Search Plugin on OpenFire Server.

Steps for Uninstalling TransFire:

1. Go to **<TransFire Home>/Uninstaller** folder
2. Double click on Uninstaller.jar. Following screenshot appears:

3. Check the option "Force the deletion of …" displayed in the above screenshot.
4. Click Uninstall.
5. Once the contents are deleted and the application uninstalled click on Quit as in the following screenshot. The application folder and the shortcuts will get removed successfully.
